

The 9B -> 27B capacity gap does not widen with severity

Whisper-Turbo rows only: 15,808 rows, 416 utterances, 19 cells of 416 each. NOTE: This calibrates a 9B -> 27B ladder. It does NOT calibrate the omni-vs-cascade capacity difference, which §3 describes as substantially larger; extrapolating from a 0.75 pp ladder to that gap is not supported by this check.
